## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

1. Claims 35 – 40, drawn to a method of determining bias in a measurement of a constituent concentration level in a sample gas in an emissions monitoring system, classified in class 73, subclass 23.31.
2. Claims 41 – 45, drawn to a method of determining bias in a measurement of a constituent concentration level in a sample gas in an emissions monitoring system, classified in class 73, subclass 23.31.
3. Claims 46 – 53, drawn to a method of determining bias in a measurement of a constituent concentration level in a sample gas in an emissions monitoring system, classified in class 73, subclass 23.31.

The inventions are distinct, each from the other because of the following reasons:

Inventions 1 – 3 are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. For example, in the operation of the emissions monitoring system using the method of invention 2 as recited in claim 41, this method specifically requires steps for measuring a sample flow rate of the cooled, dried sample gas flow and a combined gas flow rate of the cooled, dried, combined sample and span gas flow. Whereas, in the operation of the emissions monitoring system using the methods of inventions 1 and 3 as recited in claims 35 and 46, respectively, these methods do not specifically require these steps. In

the operation of the emissions monitoring system using the method of invention 3 as recited in claim 46, this method specifically requires the use of a dryer. Whereas, in the operation of the emissions monitoring system using the methods of inventions 1 and 2, as recited in claims 35 and 41, respectively, these methods do not specifically require the use of a dryer. In the operation of the emissions monitoring system using the method of invention 1, this method does not specifically require the aforementioned above steps required for each of methods 2 and 3.

Because these inventions are distinct for the reasons given above and the search required for each group is different, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
